### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: the claimed subject matter in claims 1-6,8-13 and 15 is allowable because the arts of record fails to teach or fairly suggest the claimed "method for uniform output of asynchronously transmitted digital value (bi-directional data transmission in claim 15) comprising; the receiver receiving the digital values at and output clock; the output clock is adjusted according to the determined amount of the digital values in a such a way that the digital values are outputted at the frequency with which on time average the receiver receives the digital value; and the transmission clock of the transmitter located within the receiver, transceiver, is adjusted to correspond to that of the adjusted output clock signal of the receiver as in claims 1,13 and 15.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US patent numbers 6,560,290 and 6,608,829 issued to Ahn et al. (fig.1) and Johnson (fig. 2) respectively disclose a transceiver unit having a transmitter and receiver, wherein the transmitter clock is controlled according the received signal.
